

MSP Where we are and what are the gaps ?

Samir Grimes
NH WestMed Initiative -Algeria

- Is not only zoning marine space and habitats
- Is not only technical tools (maps, ...)
- MSP is not a substitute for integrated marine and coastal area management
- MSP builds on approaches and the policies that support integrated management
- A public processes that produce acceptable, balanced and beneficial maritime “deal”

Why MSP is necessary ?

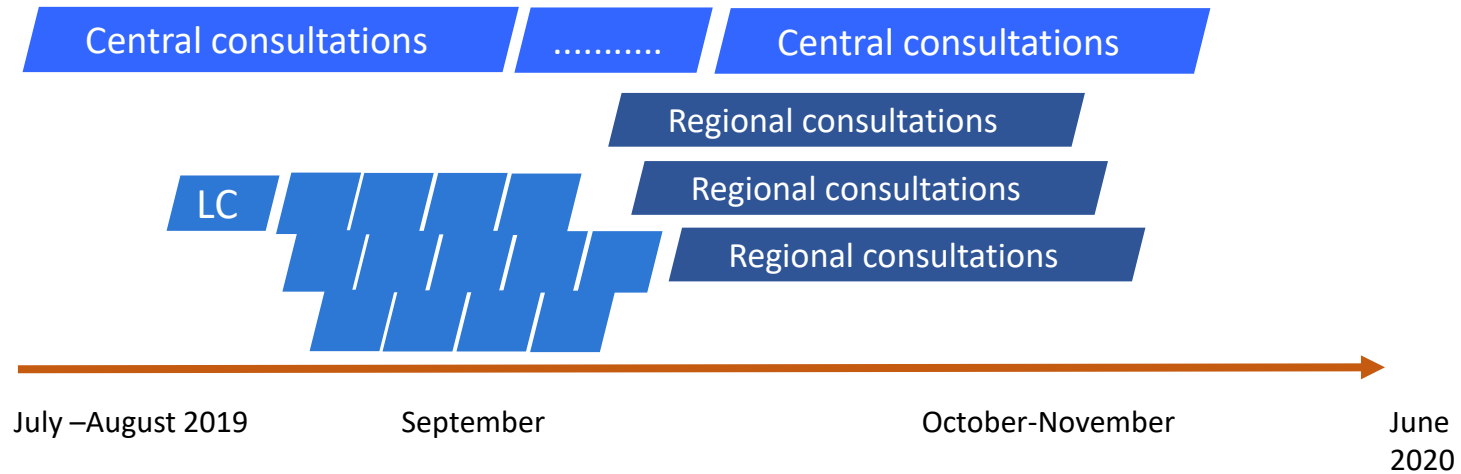

New, emerging interest, activities, players, competition, regulation ? New regulation policy

Which is the relevant MSP scale for Algeria

- MSP Regulatory policy and framework are fragmented
- There is not a single and clear framework with an institutional “leader”, MSP is disseminated among different key institutional players
- Sea is still mainly planned from the land with “land” thinking and tools

Process – National Strategy

Multi-actor and multi-level consultation to ensure that the specific characteristics of the territories are taken into account for an appropriate adaptation and optimization of all resources
