

NewTechAqua

New technologies, tools and strategies for sustainable, resilient and innovative European Aquaculture

Supported
by the

WESTMED
blue economy initiative

NewTechAqua's ambition is to expand and diversify European and Mediterranean aquaculture production of finfish, molluscs and microalgae by developing and validating technologically advanced, resilient and sustainable applications.

Researchers and partners from the NewTechAqua will test and develop new solutions to:

- Deliver solutions to improve fish and mollusc health and disease resistance
- Improve performance and quality of farmed fish and microalgae
- Make the aquaculture sector more sustainable and circular
- Increase the efficiency of aquaculture production systems
- Support diversification of fish species
- Develop new eco-friendly fish and molluscs products with high nutritional value
- Raise awareness and train aquaculture professionals

Alessio Bonaldo

Project Coordinator/ Unibo

“WestMed Initiative is able to facilitate and efficiently support links and collaborations with partners and countries of WestMed area, also facilitating initiatives for dissemination and exploitation achieved in EU projects.”

WestMED Assistance

WestMED facilitated contacts and relationship with its stakeholders in developing the Project activities. WestMED also supported the decision making within the project partnership, and assisted in expanding with new regional players in the Med-board.

All along the Project execution, WestMED assists in capitalisation, networking and dissemination of NewTechAqua.
